

Hanna Marusych

DevOps Engineer | Cloud & Platform Engineering

Chicago, IL • devopsannai@gmail.com • github.com/hannamarusych • linkedin.com/in/hanna-marusych

PROFESSIONAL SUMMARY

DevOps / Platform Engineer focused on building secure, production-ready cloud infrastructure on AWS. Hands-on experience with Kubernetes/EKS, Terraform, GitHub Actions, Docker, IAM, networking, observability, and Infrastructure as Code. Experienced in designing reusable platform components, migrating infrastructure from CloudFormation to Terraform, implementing CI/CD and access controls, and applying AI-assisted engineering workflows to infrastructure, documentation, and software delivery.

CORE TECHNICAL SKILLS

- **Cloud:** AWS, EKS, EC2, ECS, VPC, IAM, S3
- **Infrastructure as Code:** Terraform, CloudFormation
- **Containers & Kubernetes:** Kubernetes, Docker, Helm, AWS Load Balancer Controller
- **CI/CD & Automation:** GitHub Actions, Git, CI/CD, Infrastructure as Code
- **Observability:** Prometheus, Grafana, Alertmanager, Elasticsearch, Kibana
- **AI Engineering:** Agentic AI Workflows, ChatGPT, Claude, GitHub Copilot

PROFESSIONAL EXPERIENCE

DevOps / Platform Engineering

2025 – Present | Cloud & Platform Engineering

- Designed and implemented AWS cloud infrastructure using Terraform, Kubernetes, GitHub Actions, ECS, IAM, monitoring, and Infrastructure as Code practices.
- Built reusable Terraform infrastructure modules and environment-based configurations for repeatable cloud deployments.
- Implemented Kubernetes/EKS platform architecture with controlled developer and DevOps access using AWS IAM and Kubernetes RBAC.
- Developed CI/CD workflows with GitHub Actions and AWS authentication using OIDC-based access patterns.
- Worked with AWS networking, private subnets, load balancing, ingress/gateway patterns, DNS, TLS, and platform security.
- Applied centralized observability concepts using Prometheus, Grafana, Alertmanager, Elasticsearch, and Kibana.

SELECTED PROJECTS

Extra Migration

Migrated an Amazon EKS platform from AWS CloudFormation to Terraform using reusable Infrastructure as Code modules. Implemented Terraform state management, AWS IAM/OIDC integration, VPC infrastructure, and environment-based deployment structure.

Technology: Terraform • AWS • EKS • Kubernetes • GitHub Actions • IAM

RouteBox Platform

Cloud-native logistics platform built with AWS, ECS, Terraform, CI/CD, monitoring, and microservices architecture.

Technology: AWS • Terraform • ECS • Docker • GitHub Actions

Agentic AI Workflows

AI-assisted engineering workflows supporting technical documentation, infrastructure work, software delivery, and engineering productivity.

Technology: Agentic AI • ChatGPT • Claude • GitHub Copilot

ENGINEERING FOCUS

- Secure AWS cloud platforms and least-privilege access

- Kubernetes / EKS platform engineering
- Terraform-based Infrastructure as Code
- GitHub Actions CI/CD automation
- Cloud networking, IAM, load balancing, DNS, and TLS
- Monitoring, logging, and production observability
- AI-assisted engineering and developer productivity
