

Hanna Marusych

DevOps Engineer · AWS · Kubernetes · Terraform · CI/CD · Agentic AI Workflows

Chicago, IL · devopsannai@gmail.com · (347) 440-2588 · linkedin.com/in/hanna-marusych · github.com/hannamarusych

Professional Summary

DevOps Engineer with 5+ years of experience designing, building, and operating cloud platforms on AWS and Kubernetes. Experienced in Infrastructure as Code, CI/CD automation, cloud infrastructure, and platform engineering that enables development teams to deliver software faster, more securely, and at scale. Leverages Agentic AI Workflows — including Claude Code, custom skills, MCP servers, AWS Bedrock, and context engineering — to automate engineering tasks, improve developer productivity, and streamline infrastructure operations while ensuring production changes remain secure, review-driven, and governed through Infrastructure as Code. Passionate about building reliable, scalable platforms that simplify operations and improve the developer experience.

Experience

DevOps Engineer | Egencia | Chicago, IL (Hybrid) · April 2023 — Present

- Design, provision, and maintain AWS cloud infrastructure using Terraform and Infrastructure as Code, improving consistency across development, staging, and production environments.
- Build and optimize CI/CD pipelines using GitHub Actions to automate application build, testing, container image publishing, and Kubernetes deployments, reducing manual deployment effort and improving release consistency.
- Manage production Kubernetes environments running containerized applications, maintaining platform reliability, scalability, and operational stability for engineering teams.
- Standardize infrastructure provisioning and configuration through reusable Terraform modules, improving deployment repeatability and simplifying infrastructure management.
- Expand platform observability using Prometheus, Grafana, and Amazon CloudWatch, enabling faster issue detection and improving production visibility.
- Partner with software engineering teams to troubleshoot infrastructure and deployment issues, improve developer experience, and support reliable software delivery.
- Apply security best practices across AWS infrastructure, Kubernetes, IAM, and CI/CD workflows to strengthen cloud security and maintain reliable production operations.
- Incorporate Agentic AI Workflows using Claude Code, AWS Bedrock, MCP servers, and context engineering to automate repetitive engineering tasks, accelerate troubleshooting, and improve engineering productivity.

Cloud Engineer | FanDuel | New York, NY (Remote) · August 2020 — March 2023

- Managed production AWS infrastructure supporting large-scale containerized applications deployed on Amazon EKS.
- Automated infrastructure provisioning using Terraform, improving consistency, repeatability, and change management across AWS environments.
- Designed and maintained GitHub Actions workflows that automated application build, testing, container image publishing to Amazon ECR, and deployment to Amazon EKS, improving deployment efficiency and release reliability.
- Configured and maintained core AWS services including Amazon VPC, IAM, EC2, EKS, ECR, S3, and load balancing to support secure, highly available cloud environments.
- Strengthened cloud security by implementing least-privilege IAM policies, secure networking practices, and secrets management across AWS environments.
- Improved platform observability using Prometheus, Grafana, and Amazon CloudWatch, enabling proactive monitoring and faster production issue resolution.
- Collaborated with cross-functional engineering teams to improve Kubernetes platform operations, automate operational processes, and support reliable software releases.

Technical Skills

Cloud & Systems: AWS (Amazon EKS, Amazon ECS, AWS Fargate, Amazon EC2, Amazon VPC, IAM, Amazon ECR, Amazon S3, AWS Lambda, Amazon CloudFront, AWS Secrets Manager)

Containers & Orchestration: Kubernetes, Docker, Helm

Infrastructure as Code: Terraform

CI/CD & Automation: GitHub Actions, GitLab CI/CD

Observability: Prometheus, Grafana, Amazon CloudWatch

Programming & Scripting: Python, Bash

Agentic AI Workflows: Claude Code, Custom Skills, MCP Servers (read-only & mutating), AWS Bedrock, Context Engineering (CLAUDE.md / AGENTS.md)

Version Control & Collaboration: Git, GitHub, GitLab, Jira

Education

Bachelor's Degree in Management of Organizations — National Aviation University, Kyiv, Ukraine

Certifications

- AWS Certified Solutions Architect – Associate
- Certified Kubernetes Application Developer (CKAD)
- HashiCorp Certified: Terraform Associate
